Case: Malmö LBC

An easier and faster administration of all your document workflows

“Our processes and information workflows are faster, and the fact that archived documents are searchable has improved the quality of service given to our customers.”

Johan Strand, IT Director, Malmö LBC

The Challenge

Malmö Logistic Centre (Malmö Lastbilcentral AB) works within the transportation sector and has approximately 130 affiliated hauliers with more than 250 vehicles. Thousands of transports are organised yearly which include the handling of supplier invoices, receipt lists, consignment and transportation notes. Until recently, these document workflows were handled manually, which was both time consuming and made it difficult to search for information contained in archived documents. This was why Malmö LBC started to look for an automated and electronic solution for the administration of supplier invoices.

The Solution

Malmö LBC chose AutoStore from Notable Solutions to simplify and streamline their document workflows. With AutoStore the company is able to digitalise all kinds of documents, archive and make all information searchable, which simplifies working processes. It also raises the quality of service to customers and suppliers. The fact that the solution was able to handle all other document workflows in the company was a great advantage, also economically; to use specific solutions with each type of document workflow would have been much more expensive. Today, AutoStore is used with four different document workflows, and the plan is to expand its areas of use even more in the future.

The Results

By implementing AutoStore, several advantages have been obtained:

- The trace back searches in archived documents have become both faster and easier: Today, customers can search their consignment notes and receipt lists or other important information themselves, through a webpage portal on Malmö LBC's homepage. Both the customer benefits and the level of service have been increased.
- One solution for all document workflows: It is easier and more time efficient to monitor and run one solution instead of many different ones. Today, AutoStore is handling four different document workflows for Malmö LBC; supplier invoices, receipt lists, consignment and transportation notes.
- Cost and Return on Investment: It is economically advantageous to use AutoStore for all document workflows instead of using many different solutions specific to each type of document workflow.
- Customer Benefits: AutoStore makes all document workflows electronic and searchable.
- Quality: With hundreds of suppliers there are a great number of invoices to be handled. The layouts of invoices vary which makes automated document scanning and analysis difficult. AutoStore was the only solution that met the high standards and demands for automated document scanning and analysis at Malmö LBC.
- Compatibility with many different systems: If Malmö LBC wants to change its business system in the future, there is no need for complicated migrations or to buy new document administration solutions – AutoStore is compatible with most business administration systems on the market.
