Voice-driven documentation capture for ambulatory environments.
The choice is yours.

In today's fast-paced clinical environment—where documentation in the EHR is paramount and time is money—providers empowered with their preferred documentation method are better able to balance personal, engaged patient care with effective electronic documentation.

Nuance Clinic 360 solutions deliver:
– Flexible clinic workflows
– Choice in voice-driven documentation methods
– Cost effective, on-time, high quality clinical documentation
– Functional bridge for EHR use
– Integration with >200 EHRs

Efficient, high quality document creation.
Nuance's ambulatory solutions leverage the power of voice to capture the patient story, while enhancing productivity and allowing clinicians to choose the documentation method that works best for them. Physicians are free to focus on their patients and create comprehensive, accurate patient documentation easily using front-end voice recognition or dictations via mobile app, recorder, or telephone. Building upon that rich narrative as a foundation, medical facilities are better prepared for quality measurement, reimbursement, policy development, risk assessment and more. Nuance Clinic 360 solutions empower physicians and facilities to provide optimal care.

Realize the benefits of using voice to document.

Reduce costs and maximize productivity.
Clinic 360 solutions optimize documentation by leveraging common content, resulting in significant hard and soft savings. From facility-wide document templates to individual physician dictation templates, Clinic 360 solutions speed documentation. Our speech recognition engine creates high quality draft documents from audio dictations with the primary goal of reducing the amount of editing required. Corrections made to the draft documents provide feedback that continues to improve the engine. Together, physicians increase their efficiency and can maintain their patient load while still completing their administrative tasks. Beyond the increased productivity, templates reduce the amount of typing required. Whether self-editing or routing to a transcriptionist, users save both time and money.

"With Clinic 360 | Mobile, providers can see their patient schedule, dictate on the fly, upload, review, edit and authenticate with ease. It gives them the freedom to focus on their patients during exams and quickly complete the task of documentation."

NUANCE

Achieve compliance through seamless integration.
With Clinic 360 solutions, healthcare providers continue to dictate—maximizing productivity—while taking full advantage of an implemented EHR and achieving Meaningful Use.

Nuance Clinic 360, with more than 1,500 successful interfaces created by our experienced interface design team, safely and securely transmits ADT and results information to practice management and EHR systems. Alongside our EHR integration partners, our fully automated process can identify discrete information contained within a dictated note—such as symptoms or lab values—and upload the data into the EHR, while placing narrative content in the corresponding sections.

Dragon Medical 360 allows clinicians to document care quickly and accurately when accessing their EHRs in virtualized environments. Nuance works in close engineering collaboration with EHR vendors such as Epic®, Cerner®, Allscripts™, NextGen®, GE, eClinicalWorks® and others to ensure that users can dictate, edit, and voice-navigate, directly in the EHR.

Free physicians to deliver the best patient care.
By allowing physicians to use their time wisely and choose the method of document capture that best suits their needs, facilities enhance morale, productivity, and best of all, patient care. Patients—and, it follows, medical facilities—are best served by providers who are free to engage with patients rather than computer screens during exams. Dictation allows documentation to be created easily and quickly. Using speech improves documentation quality without impacting workflow, productivity, or length of workday. By making EHRs easier to use, Nuance creates a functional bridge for EHR adoption.

Enhance operations and financial integrity.
Clinic 360 solutions streamline workflow and produce high quality EHR documentation that captures the right amount of information to effectively represent the patient's experience with the provider. Respecting the narrative—supporting thorough documentation—aids appropriate coding, enhances financial integrity and ensures complete and accurate documentation. At the same time, organizations realize decreased turnaround time, shortened billing cycles, and optimized administrative tasks along with bolstered regulatory compliance initiatives for HIPAA regulations, data privacy and outcome reporting capabilities. Even more, Nuance's sophisticated infrastructure performs under lock-tight security without fail, delivering maximum, reliable performance.

Clinic 360 ambulatory solutions offer a choice in documentation methods to improve usability, flexibility and EHR use.

– **Dragon® Medical 360** is a leading front-end speech recognition solution used to navigate and document directly within the EHR system.

– **Clinic 360 | Mobile** gives physicians the ability to fully document patient encounters using only a mobile device. Users not only have real time access to their patient schedule and historical documentation, but also can quickly review, edit, electronically sign and route documentation with the touch of a finger, 24/7/365.

– **Clinic 360 | Transcription Technology** is a HIPAA-compliant web-based solution for fully managing the dictation and transcription data delivery and storage process. Users can mimic the clinic workflow, route documentation automatically and monitor and manage the pace of document creation in real time.

– **Clinic 360 | Transcription Services** consistently deliver cost effective, on-time, high quality clinical documentation with our exclusive transcriptionist allocation model and comprehensive training and QA processes.

About Nuance Communications, Inc.
Nuance Communications is reinventing the relationship between people and technology. Through its voice and language offerings, the company is creating a more human conversation with the many systems, devices, electronics, apps and services around us. Every day, millions of people and thousands of businesses experience Nuance through intelligent systems that can listen, understand, learn and adapt to your life and your work.
