eCopy Connector for HP TRIM

Seamlessly integrate paper-based information into your enterprise records management system

With the eCopy Connector for HP TRIM, hardcopy documents are quickly converted into searchable PDF files and stored as indexed digital business records in your HP TRIM enterprise records management system, directly from any eCopy ShareScan-enabled multifunction printer (MFP). Simply select the Record Type being created and enter the document properties required to store the document. In a few simple steps, information previously locked on paper is now stored according to compliance and risk mitigation rules and policies.

Dynamic, real-time connectivity between the MFP and HP TRIM records management system ensures that users always have the same access at the MFP as they do at their desktops. Any changes made to the TRIM structure are immediately and automatically reflected at the MFP. Users spend less time scanning, converting, and moving documents, and more time focusing on real work.

eCopy ShareScan's intuitive push-button interface takes the guesswork out of document scanning and record creation, so the job is done right the first time, every time. eCopy's OmniPage® OCR engine delivers unparalleled recognition accuracy, transforming static images into searchable, workable documents. Time-saving features like field auto-population and type-ahead search speed and facilitate proper HP TRIM record classification, making it easy to search and discover the scanned information in context.

Get even more from your HP TRIM investment. Let the eCopy Connector for HP TRIM put your organization on the path to more productive scanning, improved responsiveness, and enhanced enterprise productivity.

The eCopy Connector for HP TRIM enables users to scan paper documents directly into HP TRIM, where they are stored as searchable, usable business records right, from any eCopy ShareScan- MFP, ensuring fast and easy access to the right information, where and when it is needed.

User Benefits:

- Gain control over paper-based content by integrating it into your HP TRIM records database in a few simple steps
- Jumpstart workflows and speed document-centric collaboration by integrating paper data directly into the HP TRIM system
- Transform static images into searchable documents as they are scanned
- Be immediately productive

Administrator Benefits:

- Realize even greater value from existing HP TRIM investments
- Increase compliance and streamline discovery
- Increase information security by eliminating unsecure paper-based documents from circulation
- Speed adoption and reduce support calls with push-button simplicity and a consistent user experience
- Create audit trails via user validation to ensure compliance with corporate security policies and government/industry regulations
- Stay in sync — dynamic connectivity keeps the Connector up to date as HP TRIM is changed or updated
- Leverage flexible configuration options to support in-context discovery by workgroup, record class, and more

System Requirements:

- eCopy ShareScan Version 5 SP2 or higher
- HP TRIM Version 6.0 and above
- Microsoft® .NET Framework Version 3.5 must be installed on the eCopy ShareScan Manager Server

Device Compatibility:
