## DATASHEET

### eCopy Connector for Microsoft® SharePoint®, Server Edition

#### Seamlessly integrate paper-based Information into Microsoft SharePoint

While Microsoft SharePoint makes it easy for people to share information and manage documents, critical business information is often locked on paper, inaccessible by SharePoint users. Whether it is a stack vendor invoices, contracts, or simple letters, paper-based documents stand in the way of true collaborative and document management efficiency. With the eCopy Connector for Microsoft SharePoint, Server Edition, users scan hardcopy documents into SharePoint directly from any eCopy ShareScan-enabled multifunction printer (MFP) or scanner as secure, searchable, and editable PDFs. ShareScan's dynamic, real-time connection between SharePoint and the MFP gives users access to the same SharePoint destinations—sites, libraries, folders, and lists—available from their desktops in a simple, straightforward User Interface. Support for powerful SharePoint features like My Sites, Favorites, and Business Data Catalog (BDC) Lookups ensure that users can easily find and access the information and destinations they need to quickly and easily get paper-based information where it needs to be, accessible by those who need it most. Users spend less time scanning and moving documents and more time focusing on real work.

eCopy ShareScan's intuitive push-button interface takes the guesswork out of scanning so users get the job done right the first time, every time. eCopy's OmniPage® OCR engine delivers unparalleled recognition accuracy, turning static images into searchable documents, making information even more accessible. My Sites support and Scanning Favorites provide users a personalized scanning experience at the MFP, allowing them to create lists of frequently accessed SharePoint destinations and access these locations with the push of a button, rather than navigating through the SharePoint structure. Through Business Data Catalog (BDC) and Lookups, the eCopy Connector empowers users to incorporate paper based documents into complex workflows that leverage information from your line of business systems. Auto-populating fields and type-ahead intelligence save time, while mandatory field enforcement ensures proper indexing.

Get even more from your SharePoint investment. Let the eCopy Connector for Microsoft SharePoint put your organization on the path to more productive scanning, faster information access, superior business collaboration, and better decision making.

#### User Benefits:

- Cut through the clutter—Integrate paper-based documents into SharePoint in just a few simple steps—without ever leaving the MFP
- Interact with SharePoint on your terms—leverage My Sites and Favorites to personalize your scanning experience
- Work faster—Speed collaboration by integrating paper-based data directly into SharePoint
- Make information more accessible—Transform static images into searchable documents as they are scanned
- Extend your reach at the MFP—leverage data from backend applications like SAP, Siebel, etc. through Business Data Catalog to index documents and initiate workflows
- Be immediately productive; scan to SharePoint with no training required
- Get even more done at the MFP or scanner by further automating routine tasks with eCopy Document Extenders

#### Administrator Benefits:

- Enable end user business processes by leveraging SharePoint BDC and lookups from the eCopy enabled MFP
- Realize even greater value from existing SharePoint investments
- Speed adoption and reduce support calls with push-button simplicity and a consistent user experience
- Maintain audit trails via user validation to ensure compliance with corporate security policies and government/industry regulations
- Stay in sync—Dynamic connectivity keeps the Connector up to date when SharePoint is changed or updated
- Leverage flexible configuration options to accommodate specific field types, content types, and site, library, folder or list destinations

#### System Requirements:

- eCopy ShareScan® Version 5 SP2 or higher
- Microsoft SharePoint 2007 or 2010 all versions
- Microsoft® .NET Framework Version 3.5 must be installed on the eCopy ShareScan Manager Server
- A small Windows® service must be installed on the SharePoint Server to allow for SharePoint connectivity

**Device Compatibility:** For the latest list of supported email servers, document management systems, network fax servers, and cost recovery systems, please visit: <http://www.nuance.com/for-business/by-product/ecopy/ecopy-connectors-and-extendors/index.htm>  
For the latest list of supported platforms for eCopy ShareScan, please visit: <http://www.ecopy.com/support/platforms.htm>
