eCopy Connector for Sage 50 Accounts

Seamlessly attach paper-based documents to customer and supplier records

With the eCopy Connector for Sage 50 Accounts, users can integrate paper-based information into customer or supplier records within Sage 50 Accounts directly from a multifunction printer (MFP) or scanner. Dynamic, real-time connectivity between eCopy ShareScan and Sage 50 Accounts allows users to search customer or supplier records by phrase or record type, choose the appropriate record from the search results, and scan and attach a paper document to the specified record — all in just a few simple steps. The scanned document appears as an attachment within the record's Memo tab, where it can be securely managed and easily accessed for effective customer and supplier management.

The Connector's intuitive push-button interface takes the guesswork out of scanning so the job is done right the first time, every time. eCopy's OmniPage® OCR engine delivers unparalleled recognition accuracy, turning static images into searchable documents, making information even more accessible to all Sage 50 Accounts users. Robust search capabilities let users quickly find the specific customer or supplier record to which they wish to attach the scanned document. Users spend less time managing paper associated with customer and supplier accounts and more time focusing on real work.

Get even more from your Sage 50 Accounts investment. Let the eCopy Connector for Sage 50 Accounts put your organization on the path to more productive scanning, more comprehensive recordkeeping, and better customer and supplier management.

The eCopy Connector lets you attach scanned documents to Sage 50 Accounts customer or supplier records with a few simple steps at the MFP.
