

Scan with Dropbox Connector for eCopy™ ShareScan®

The Connyx Scan with Dropbox Connector for eCopy™ ShareScan® lets you scan and store documents in the cloud using Dropbox. Dropbox is a fast and secure cloud based file hosting service that let's you store, back-up, version and share your files online. With the Scan with Dropbox Connector, you get all of the benefits with Dropbox file storage, directly at your MFP.

Scan with Dropbox Connector for eCopy™ ShareScan®

FEATURES

- Free Software
 - Real-time Dropbox navigation
 - Native integration
 - Multiple authentication modes
 - Access to ticket based support *
- * with purchased Support & Updates only

Operation modes

As the administrator you can configure each profile to allow or disallow file browsing and updates. The former allows a user to browse documents in the Dropbox repository and update them, the later effectively makes the process an "add only" experience, keeping existing documents safe from changes.

User Experience

Navigating the Dropbox repository is as intuitive as browsing folders on your computer, just point and click to traverse the directories. Intelligent file naming rules validates user input in real-time, displaying the destination filename while you type. By utilizing eCopy™ ShareScan's Offline Processing mode, you only have to spend the time it takes to decide destination at the MFP device, processing and uploading of your scanned documents is taken care of in the background.

Security

Enable runtime authentication and have users authenticate against a Dropbox account before they scan. An administrator also have the option to specify credentials in the connector settings, removing the authentication altogether, to enable faster interaction at the MFP. Runtime authentication can be combined with eCopy™ ShareScan's Session Logon functionality, allowing the user to tie a Dropbox account to a Windows Domain or Workgroup account. Your files are transmitted over a secure (SSL) data channel and stored encrypted (AES-256) at Dropbox servers.

Authenticate safely and securely in real-time using your Dropbox credentials.

Navigate your Dropbox directories to choose your storage point, or a file you want to write over.

Supply your file name, press "Send" and know that your file has been safely uploaded to Dropbox.

COMPATIBILITY

First generation of
Dropbox API

eCopy™ ShareScan®
v5 or later

All OS:es and
devices supported
by ShareScan®
