

ACCELERATE CLINICAL DOCUMENT CAPTURE

eCopy ShareScan for NextGen Healthcare

Increase productivity, reduce costs, and improve the quality of care with direct-to-EHR scanning

CHALLENGE:

Healthcare organizations face significant challenges in delivering high-quality, accountable care because much of the information needed to provide that care remains locked in paper form. As a result, healthcare organizations must manage high volumes of paper, leading to the following challenges:

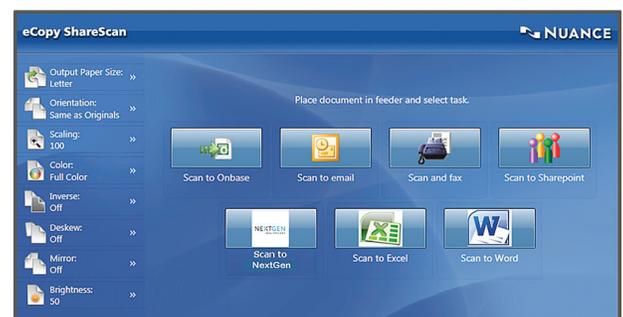

- Centralized scanning processes can result in delays before documents are made available in the NextGen EHR.
- Manually indexing documents to the patient record after scanning is a productivity drain and may result in errors.
- Distributed capture platforms can be difficult to standardize, and often result in breaks in HIM scanning protocols.

SOLUTION:

eCopy ShareScan is a cost-effective, easy-to-deploy solution designed to accelerate capture using the MFPs (multi-function peripherals) and scanners you already own. eCopy ShareScan turns network scanners and MFPs into secure “on-ramps” to the NextGen EHR, accelerating access to patient data and making the patient record more complete.

KEY BENEFITS

- Simplified point-of-care scanning from the MFP
- Access to incoming patient records in the NextGen EHR in minutes
- Accelerated processing with soft buttons tied to specific document types and workflows
- Standardized interface across capture devices to reduce training and IT requirements

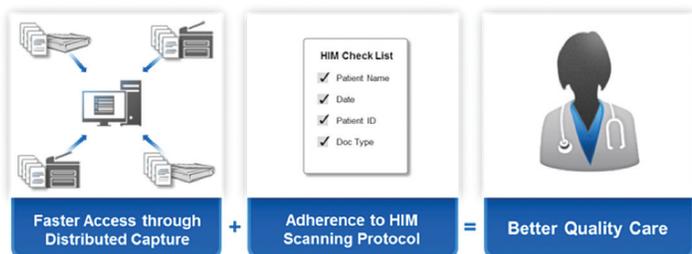

eCopy ShareScan collapses multi-step scanning workflows into a few simple button presses at a scanner or MFP. With an interface as easy to use as a smart phone, documents are scanned and indexed in the NextGen EHR

IMPROVED CARE WITH ACCELERATED ACCESS TO PATIENT INFORMATION

Centralized and manual scanning operations can be costly and create delays in making documents available in the NextGen EHR. eCopy ShareScan turns the existing scanners and MFPs across the facility into secure “on-ramps” to NextGen clinical workflows. This accelerates access to patient data and provides clinicians with a more complete picture of the patient record.

STANDARDIZED CAPTURE TO REDUCE COSTS AND SUPPORT HIM PROTOCOLS

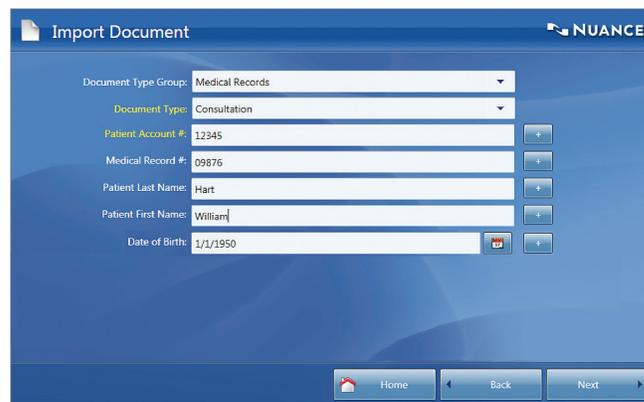

eCopy ShareScan’s intuitive user interface reduces training costs and allows hospitals and clinics to reliably capture time-sensitive documents closer to the point of care. With the ability to support nearly any brand of MFP or scanner, eCopy can enhance productivity for NextGen customers with single or mixed fleet environments. With support for dynamic look-ups for data values in the NextGen EHR, eCopy ShareScan can help ensure easy and accurate indexing of scanned records.

ShareScan provides “continuity of capture” by standardizing the scanning processes across all device types to ensure records are always captured and indexed reliably.

SIMPLIFIED NEXTGEN INTEGRATION

The eCopy Connector for NextGen was developed with the NextGen development team, helping ensure seamless integration to the EHR. The eCopy Connector for NextGen supports direct lookups for quick retrieval of MRNs, document types, and other metadata from NextGen for easy document indexing at virtually any point-of-care scanning device.

A FLEXIBLE SOLUTION TO MEET ALL OF YOUR CAPTURE NEEDS

As the world’s best-selling scanning and workflow solution for MFPs, and with additional connectors for popular business applications, eCopy ShareScan provides everything needed to automate paper-to-digital workflows in healthcare.

KEY FEATURES:

- Simplified integration through the NextGen Connector developed in conjunction with NextGen Healthcare
- Batch processing with barcodes and zonal OCR processing for workflow automation
- Dynamic patient and document type look-ups for accurate indexing
- Additional integrations with popular ECM, fax server, and business applications

ABOUT NUANCE COMMUNICATIONS, INC.

Nuance is the market leader in creating clinical understanding solutions that drive smart, efficient decisions across healthcare. More than 500,000 physicians and 10,000 healthcare facilities worldwide leverage Nuance’s award-winning, voice-enabled clinical documentation and analytics solutions to support the physician in any clinical workflow and on any device.

To learn how Nuance can help you meet your healthcare challenges, please visit www.nuance.com or contact your Nuance sales representative today.
